Strike a balance between classic and contemporary topics and theory. The new edition of Bernstein, *Psychology* engages students with local ideas and examples, within the context of psychology as an international discipline. Rich cultural and indigenous coverage is integrated throughout the text, as well as new dedicated 'Indigenous Psychology' and 'Cultural Psychology' chapters.

- Two NEW chapters: '**Indigenous Psychology**' and '**Cultural Psychology**', developed through consultation with Indigenous Australian and New Zealand academics
- Support student understanding of the skills required and how to master them while studying psychology by reviewing the **Graduate Attributes** and **Psychological Literacy** sections at the beginning of each chapter
- Examine how theoretical concepts have been used in practice through the **Applying Psychology** questions at the beginning of each chapter and throughout the text
- **Linkages** sections and icons throughout the text highlight the network of relationships among psychology's subfields, helping students see the 'big picture' of psychology as an interrelated discipline
- **Thinking Critically** sections in each chapter make psychological processes more explicit and accessible by providing a five-question framework for analysing evidence before drawing conclusions
- The **Focus on Research** sections examine the ways in which research methods have been applied to help advance understanding of behaviour and mental processes
